### **Caleffi opens new North American corporate headquarters**

MILWAUKEE – Caleffi, an international manufacturer of high-quality components for hydronic and solar heating based in Italy, recently opened its new North American corporate headquarters building in Milwaukee.

Caleffi outgrew its former location in just five years because of its rapid growth in hydronic and solar.

The new, modern corporate center comprises 35,000 square feet and is a model of energy efficiency and progressive use of natural resources. Radiant heating warms the floors, while natural sunlight filters in through skylights which accompany energy-saving lighting in the building's office area and warehouse. Solar heating will supplement the building's existing high-efficiency boilers.

According to Rex Gillespie, director of marketing, Caleffi felt it was important to invest in increasing its physical presence in North America.

“Caleffi’s philosophy is to have the space to house inventory components here to ensure customers are serviced quickly,” he said.

A leader in the European hydronic market for half a century, Caleffi products are installed in more than 50 countries worldwide. The company’s new solar offerings complement their long-standing hydronic products, helping customers live comfortably while softening their impact on the environment.
